

Market Release Note

MRN-TS9002-35B1

Product number:	TS9002
Product description:	Titan 3.5
Product version:	TS9002-R03.05.00, build 1
Affected parts:	TS9002
Release date:	12 December 2016

Interlogix is pleased to announce the immediate availability of Titan 3.5.

The release of Titan 3.5 reaffirms our commitment to continue to enhance our platforms, keeping them current in technology, in competitiveness and in market attractiveness; while delivering the latest in new and enhanced features.

New features

Titan 3.5 offers the following improvements:

- Titan now makes upgrading from a Challenger V8 panel even easier. This version provides an option during conversion to maintain Challenger V8 input numbering. This means that the panel input numbering works the same way on the Challenger10 and is limited to 512 inputs. NOTE: Requires Challenger10 firmware V10-06.12250 (see MRN).

Improvements

- Command Timeout has been modified to 15 seconds to improve V8 Comms
- Adjusted available formats in the Reader Configuration Card form
- Remove the BDE warning that appears after installing Titan.

Documentation

Marketing collateral	Titan Datasheet
	Tecom comparison matrix
Manuals	User Manual
Software download	Download the latest version of Titan at www.interlogix.com.au/downloads

Issues resolved in this release

- Resolved issue where 'Interface Port' was not updated corrected when jumping between paths
- Resolved issue where uploading users with no name was handled incorrectly
- Resolved issue where an upload from Challenger10 into a blank system could create doors as RAS's
- Resolved issue that would prevent a V8 Challenger type being selected on a new blank system
- Resolved issue where V8 -> Challenger10 migration would not cancel when requested
- Resolved issue where Custom History Report would not filter by selected system when searching for text
- Resolved issue where 'Update raw card data' would produce an error when the offset is not populated
- Resolved issue where converting from Pre V10-06 to Challenger10 could cause a key violation
- Resolved issue where all users could be set to Void if an upload failed
- Resolved issue where Door Group would not save Timezones in certain conditions
- Resolved issue where Event descriptions on maps would sometimes disappear under certain conditions
- Resolved issue where 'Access Denied Invalid Code' message would include a user number
- Resolved issue where Holiday Types would not be saved when creating across multiple panels

Known issues

- When multiple panels are connected using multi-drop on a single serial port, there may be times that only the first Challenger panel communicates. If this should occur, go to Control > Challenger Version No, then recall the version for all panels. This will prompt the panels to communicate correctly.
- It is not possible to convert a Challenger10 with V8 input numbering to use standard Challenger10 input numbering, and vice-versa.
