

## Market Release Note

MRN-TS97101-2B18

---

Product number: TS97101

Product description: Security Commander Version 2

Product version: TS9100 Version 2.02 Build 18

Affected parts: TS97101MEDIA, TS97101L, TS97101S, TS97101P, TS97301, TS97305, TS97316, TS97401, TS97501, TS97608

Release date: 2nd December 2013

Interlogix is pleased to announce the immediate availability of Security Commander 2.

The release of Security Commander 2 reaffirms our commitment to continue to enhance our platforms, keeping them current in technology, in competitiveness and in market attractiveness; while delivering the latest in new and enhanced features.

## New features

Security Commander 2 offers the following improvements:

### Challenger10 Support

- Full management of Challenger10 control panels
- Simultaneous operation of Challenger V8 and Challenger10 control panels
- Integrated Challenger V8 to Challenger10 migration functionality

### New Titan migration utility

- All Challenger panel and user programming is now automatically migrated (including door/floor/alarm groups and PIN codes)
- Upload from Challenger hardware no longer required
- All 16 panels in a Titan systems can be automatically migrated
- Now includes diagnostic log to easily diagnose migration issues

### Improved installation

- Now supports Windows 7 64-bit on server and clients
- Operators no longer need to be added to 'AllianceAdmin' or 'AllianceGroup' Windows local user groups
- The Windows 'Secure' user is no longer required
- Reboot no longer required when licensing system
- Clients are no longer required to license with the server to enable connection

- New database upgrade tool allows automated update from any previous version
- Photo ID, graphic map and report information files are now stored in the database to reduce reliance on Windows files sharing for client operation
- Multiple network cards now supported
- Dynamic IP addresses now supported on client machines
- New, detailed installation log is automatically displayed if any errors have occurred during installation process

#### Improved system programming and operation

- Door/floor/alarm groups can now be assigned directly to users (like Titan)
- Existing person profiles can be used as templates to quickly assign multiple groups across multiple panels
- Badge records can be created in bulk
- Person, Badge, Alarm and Input records can be modified in bulk
- System can now pre-populate new badge records with description, card format, site code and person when new badge record is created. This reduces steps required to create new cards

#### Improved reporting

- Added new 'Person in Group' reports to enable operators to easily determine which users have which door, floor or alarm groups assigned to them.
- History report now easier to read with single line report format
- History report can now filter by person using simple drop down list
- Badge history report can now filter by person using simple drop down list
- New 'Print Preview' button available on each report form
- Reports have been reformatted to change data fields from yellow to white to make reports more readable when printed.

#### Smart Card Programmer integration

- TS0870P Smart Card Programmer is now natively supported within the main Security Commander interface
- New cards can be programmed from within the badge form
- Now supports credit functionality
- Configuration cards can now be created and saved as templates for future use
- Smart Card Programmer configuration can now be uploaded into the database
- Separate TS8700 Smart Card Programmer software is now obsolete

### Improved user experience

- New device control form allows for control and status of all Challenger devices in a single form
- Enabled multi-monitor support for monitor forms and new control form
- Updated look and feel of forms to adopt Windows visual styles
- Updated form columns, jump menu links and main menu to improve navigation
- Operator no longer required to enter login details to close Security Commander screen

### Lite Edition

- New TS97101L (Lite Edition) licensing option available to provide low cost alternative to Titan as management software
- Differences from standard edition:
  - Single client only
  - No graphic maps
  - No video integration
  - No email capability
  - No time and attendance reporting
  - 5 panel maximum
- New Lite edition can be easily upgraded with the purchase of TS97101S or TS97101P license. No reprogramming or migration procedure is required.

### Other additions

- Automated database backup utility
- Delete Challenger download buffer option added to controller form
- Time synchronisation for Challenger panels
- Graphic map form pre-populates with previously opened map
- Device descriptions on graphic maps now display only when mouse hovers over the device
- Standard Edition now includes 5 panels in the base license, instead of 1 panel
- Now supports up to 10 clients with MS SQL Server 2008 R2 Express

## Issues resolved in this release

- Person name not showing in alarm history report when saving in CSV format
- 37-bit card format was not always generating raw card data correctly
- Custom audio output did not work on Windows 7
- Reports would intermittently not run due to being unable to locate Resource.dll
- Database backup with Database Maintenance tool didn't work on 64-bit operating systems

## Known issues

- Challenger upload can stall if a standard DGP is polled as a 4-Door Controller
