Intrusion & Access Control Solutions

Integrated solutions for the retail industry

VIDEO SURVEILLANCE   INTRUSION   ACCESS CONTROL   SECURITY SYSTEM MANAGEMENT
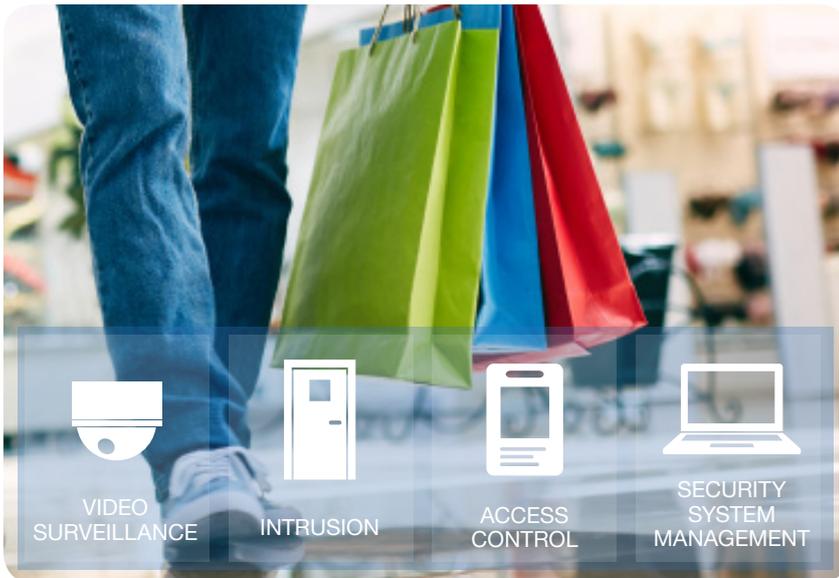

Retail Sector overview

Retailing is a business with unique challenges. In an open environment with free public access, retailers must protect their assets while also quickly addressing changes in consumer preferences and market trends.

The security system has a lot of territory to cover - from the front entrance, sales floor and the stock rooms to the checkout lines and the loading docks.

It's essential that any security solution incorporates technologies that reduce the time it takes to perform common tasks and also enables you to manage remote systems from a central location.

The Tecom intrusion and access control portfolio gives retail chains the perfect solution to ensure their staff, customers and property are kept safe 24/7, 365 days a year.

The Solution

Whether you have 2 stores or over 1,000 stores nationally, the Tecom solution can grow as your business grows through a number of smart technologies offering you a single platform to manage your properties – regardless of size or complexity.

Non-trading hours are particularly vulnerable for retail chains and it is important to protect assets as well as people during these times. Multiple alarm types cater for opening hour fluctuations enabling you to manage your security system as your stores cater to customer demands.

Through the integration of alarm and access control, an Interlogix security system transmits any alarm or system event during non-trading hours. Be alerted to an event from critical machinery in your premises to nonfunctioning intrusion devices. This can be done via your chosen communication medium.

Employees are kept safe after hours, via alarm control in the areas of your choice as well as securing the perimeter. This gives you peace-of-mind that Interlogix is protecting you during business hours and your security system is doing its job after hours.

Expand your system further by integrating your CCTV system, giving you a complete view of your premises at all times. Capture footage of employees and customers 24/7 and should an incident occur, you can easily retrieve footage for auditing purposes.

As well as protecting your assets, customers and employees, the Tecom solution enables regional / store managers to track and manage auditing and compliance procedures that need to be enforced based on head office policy. View alarms and events via web-based software and you can even remotely control access doors from your smart phone giving you full control of your system from any location with an internet connection.

Interlogix solution

To achieve maximum efficiency and control of your retail premises, Interlogix recommends a Tecom solution. Combining a Tecom Challenger panel, Web Management System and the Tecom IP Receiver gives you a fully functional intrusion and access control solution, giving you the ability to tailor your system to your business needs. For real-time, convenient control, manage your system with the Tecom Mobile on your favourite device.

TruVision recorders and cameras can also enhance the control of your system and help deter threats through visual aids.

End result

Retail chains, single or multi-chain, require a solution that offers flexibility and control due to changing demands of customer traffic and trading hours. An Interlogix solution ensures an efficient, practical security installation that can grow as your stores grow.

Protect your investment and keep your people safe with an intrusion and access control solution designed for the Australian market.

Contact your Regional Sales Manager to find out how you can keep your staff, premises and customers safe.
